

NAME

`exif_date_adjust` – Adjust EXIF modification date

SYNOPSIS

`exif_date_adjust` [*options*] offset files

DESCRIPTION

`exif_date_adjust` adjusts the EXIF modification date of a jpeg image. This can be used to adjust time-stamps where a camera had an incorrect time, or to set the modification date to match original capture time after being changed by graphic editing software.

OPTIONS

`-n, --dry-run`

Perform a dry-run, without actual changes.

`-v, --verbose`

Provide verbose output.

`-w, --warnings`

Treat missing EXIF data as a warning. Omit this option if missing data should not affect a successful exit status.

EXIT STATUS

0 on success, 1 on error, 2 on warning (EXIF data not found).

SEE ALSO

`exif(1)`, `exif_dates_to_file_dates(1)`, `exif_where(1)`

CAVEATS

This utility is timezone naive.
