

NAME

`exif_dates_to_file_dates` – Set file modification dates using EXIF data

SYNOPSIS

`exif_dates_to_file_dates` [*options*] files ...

DESCRIPTION

`exif_dates_to_file_dates` sets jpeg file modification times based on the EXIF metadata contained within the file. The original capture time is used, if present; otherwise, the modification time is used. If neither is present, files are left untouched.

OPTIONS

-m, --modification-time

Prefer EXIF modification time over capture time.

-w, --warnings

Treat missing EXIF data as a warning. Omit this option if missing data should not affect a successful exit status.

EXIT STATUS

0 on success, 1 on error, 2 on warning (EXIF data not found).

SEE ALSO

`exiv2(1)`, `exif_where(1)`, `exif_date_adjust(1)`

CAVEATS

This utility is timezone naive.
