

NAME

rotate_jpeg – Rotate jpeg image

SYNOPSIS

rotate_jpeg [*options*] action image-file ...

DESCRIPTION

rotate_jpeg rotates a jpeg image by modifying the EXIF Orientation field. The image encoding itself is unchanged, so no loss is incurred by the reorientation.

Note that not all software respects the orientation field for display—notably, most web browsers ignore it when rendering an image as part of a page.

Action may be one of:

cw

Rotate clockwise.

ccw

Rotate counterclockwise.

acw

Rotate anticlockwise.

180

Rotate 180 degrees.

mirror

Mirror image/flip left to right.

flip

Flip image top-to-bottom.

OPTIONS

-n, --dry-run

Perform a trial run, without changing the image file.

EXIT STATUS

0 on success, non-0 on error.

SEE ALSO

sanesize(1), **exiv2(1)**, **display(1)** with attention on *-auto-orient option*
