

Proximity

sort on:

- Present (true=earlier)
- last polled (ascending)

Poll cycle:

for each user
check for presence

if not present

- if all devices have been pinged since last seen, and not yet reported, report non-presence

- Ping "best" device

- if no response after ping mark device as not present

else (is present)

- if freshly present report arrival
- record device presence

if any users not present
poll unknown is until found or range
